

RANGELY

COLORADO

Town Council Packet

October 13, 2020 @ 7:00pm

1 – Agenda

GUIDELINES FOR PUBLIC INPUT

Public Input is a vital and important portion of every meeting and will be permitted throughout the meeting, but according to the following guidelines:

- a. Public input is allowed during the Agenda identified **Public Input** and **Public Hearing** portion of the meeting.
 - i. If you would like to address the meeting during the appropriate times, please raise your hand and when called upon you will be asked to come to the podium. ***Announce your name*** so that your statements can be adequately captured in the meeting minutes.
 - ii. ***Please keep your comments to 3-5 minutes*** as others may want to participate throughout the meeting and to insure that the subject does not drift.
- b. Throughout the meeting agenda calls for public input will be made, generally pertaining to specific action items. Please follow the same format as above.
- c. At the conclusion of the meeting, if the meeting chair believes additional public comment is necessary, the floor will be open.

We hope that this guideline will improve the effectiveness and order of the Town's Public Meetings. It is the intent of your publicly elected officials to stay open to your feelings on a variety of issues.

Thank you, Rangely Mayor

Town of Rangely

OUR MISSION

The mission of Colorado Northwestern Community College is to enhance people's lives by providing an accessible, affordable, quality education.

OUR VISION

Colorado Northwestern Community College will be the college of choice for students seeking a unique education grounded in the Colorado experience.

STATEMENT OF PROGRAM PURPOSE

The purpose of Workforce Training and Community Programming is to support the overall mission, vision, and values of the college specifically by focusing on non-credit programs creating opportunities for life-long learning, incubating innovative programming, and foster community involvement, and economic development.

FOCUS ON THE STUDENT LEARNER

- Grow non-credit online learning program
- Develop an apprenticeship program
- Offer free & low-cost community programs
- Innovate & test new programs
- Re-imagine study-travel programs

COMMUNICATION

- Grow social media reach
- Innovate direct communication
- Strategically leverage marketing
- Improve stakeholder engagement
- Measure marketing impact

PARTNERSHIPS

- Grow customized business contracts
- Develop agreements with higher ed partners
- Create Workforce Training Advisory Board
- Create apprenticeship partnerships
- Implement BEST softskills program

SUSTAINABILITY

- Stabilize and grow revenue
- Increase human capacity
- Grow talent
- Implement long-term planning
- Implement regular review and change process

- 8 – Public Hearings
- 9 - Comittee Meeting
- 10 - Report from Council
- 11 - Reports from Supervisors

12 – Reports from Officers

13 – Old Business

14 – New Business

To whom it may concern,

I am writing this letter to express my interest in the open Trustee position on the Rangely Town Council. I have lived in Rangely with my family since 2017, and would be a great servant to the town and its citizens. My background in law enforcement, family, and past experiences in Alaska give me a unique perspective that will allow me to contribute to the council's mission in meaningful ways.

I have served as a law enforcement officer for 9 years, 6 years in Alaska and 3 years in Rio Blanco County. My focus in law enforcement has always been to serve the public, and do everything possible to support quality of life and protect individual rights. My knowledge and background in law enforcement makes me a great candidate for the open position as local government is uniquely positioned to help protect the rights of the individuals within our community. Additionally, my bachelor's degree in Justice and Homeland Security and Emergency Management has given me further education related to the law and the need to keep your community prepared for what could happen. We are in the midst of unprecedented times where it is important that community leaders stand and support their communities more than ever. I can be one of those leaders with you.

I currently live in Rangely with my wife and 3 children. My children, ages 16, 11, and 7, are spread out between the junior/senior high school and the elementary school. Having children that live within this community also gives me a focus toward our school system, and the opportunities that our community offers for the next generations. Rangely offers unique opportunities for the youth that grow up here and I can be a part of supporting that and growing those opportunities within our community.

Moving to Alaska at the age of 7 years old, I spent the majority of my youth and a portion of my early adulthood growing up in that unique and unforgiving environment. I experienced the realities of living in a remote area with extreme weather, and the perspective you must have in such places. I also experienced the realities of living in a state that was almost entirely reliant upon the natural resources industry, and the need for diversification. Rangely has taken great strides over the years that I have been here to diversify the industries that help to support the town and its people, and my perspective can help support that mission. I also understand the need for self-reliance when the winter weather we experience can often isolate us even more from the resources of larger areas.

I want to thank you for your consideration of my letter of interest for the open Trustee position on the Rangely Town Council, and look forward to speaking to any of you on the matter. I believe that we can do great things together for Rangely and the citizens that we serve.

Sincerely,

Max Becker

A handwritten signature in black ink, appearing to read 'Max Becker', with a long, sweeping horizontal line extending to the right.

August 31, 2020

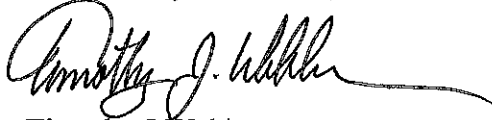

Lisa Piering
Rangely Town Manager
209 East Main Street
Rangely, CO 81648

Dear Mrs. Piering:

Please accept this letter of interest to serve on the Rangely Town Council. I would like to have my name added to the list that the Town Council will be considering for potential candidates in filling Mr. Tyson Hacking seat which he will be vacating due to a job transfer to another state.

Thank you for your time and consideration in this matter. Should you need to speak with me please call me; Cell 970-629-1715, Office 970-675-8211, or Home 970-675-8124.

Respectfully Submitted,

Timothy J Webber

RE: Special Event Permit for the Elks Lodge liquor license (October Fest)

Date: September 27th, 2020

I have reviewed the application for the Elks Lodge liquor license (October Fest). There should be no problem if this is done the same way as all special events are conducted. All alcohol sales will be governed by local ordinance and state laws.

Chief Hamblin

Reviewer Notes:

Application Overview ☐

You are **required** to work with your Regional Field Manager prior to completing your application.

The Department of Local Affairs' (DOLA) Energy and Mineral Impact Assistance Fund (EIAF) program was created to assist political subdivisions that are socially and/or economically impacted by the development, processing, or energy conversion of minerals and mineral fuels. Funds come from the state severance tax on energy and mineral production and from a portion of the state's share of royalties paid to the federal government for mining and drilling of minerals and mineral fuels on federally-owned land. The creation of the fund is outlined in C.R.S. 34-63-102 (Federal Mineral Lease) and C.R.S. 39-29-110 (Severance). Grant dollars are to be awarded for the planning, design, construction, and maintenance of public facilities and for the provision of services by political subdivisions.

Requests in this Cycle 20-11 may be for either **Tier I:** up to \$200,000 *or* **Tier II:** over \$200,000 and up to \$1,000,000 with a 50/50 match requirement for any application. Tier I award notifications are anticipated in late November. Tier II applicant presentations are scheduled for early January 2021 with funding decisions anticipated later that same month.

For more information and additional documentation on the EIAF program, please go to the program website at:

<https://cdola.colorado.gov/energymineral-impact-assistance-fund-grant-eiaf>

[Rangely WWTP New Headworks](#)**b. Amount of grant funds requested**

* The amount requested should equal "Grant Request Total" line from the project budget below.

[830,237.00](#)**c. Matching Funds**[830,237.00](#)**d. Description of the project scope of work**

Description of the various tasks involved in the project including specific data such as quantities, mileage, square feet, linear ft. etc., as well as specific project location within city and/or county etc. Please be specific to the project. (2,500 character limit)

The scope of work for this project is to build a new ~ 1250 square foot headworks building at the Town of Rangely's Wastewater Treatment Plant (WWTP). The existing 3000 square foot headworks building houses primary treatment processes including inorganics removal, grit removal and classification, primary solids settling, and preliminary aeration, and the electrical and motor control equipment needed to operate the facility. The facility is over 38 years old, and parts of it are as much as 50 years old. Its deep basins required substantial concrete work to build walls that are over 20 feet high, and the concrete is deteriorating. The building leaks around the perimeter. The concrete at the lowest level can be crushed with a screwdriver. The building and its treatment basins have exceeded their useful life and need to be replaced. A new headworks building will take advantage of the improvements made in wastewater treatment technology and be smaller and able to achieve the same treatment in a smaller foot print. It will house new equipment to complete primary treatment, including prescreening for inorganics removal, a grit separation, cleaning and removal system for disposal, primary settling, and preliminary aeration. Electrical Code also requires upgrades to the Motor Control Center (MCC) for the treatment equipment, which is presently located in the same building, but should be separated to prevent undesirable interactions between electricity and water.

e. Describe the problem, opportunity or challenge that resulted in the request.

(2,500 character limit)

The existing ~3000 square foot headworks building, which houses primary treatment processes, is over 38 years old, and shows significant structural deterioration which has been accelerating in the last few years. Its deep basins required substantial concrete work, and the walls extend over 20 feet from the lowest levels. The concrete has degraded and interior walls are crumbling under minimal pressure or disturbance. The building also leaks around the perimeter, leading the Town to believe the building is losing its structural integrity and will become unsafe if it is not already so. The challenges of replacing critical equipment and motor control instruments in an operating facility without sacrificing quality of treatment and the ability to meet discharge requirements lead the Town and its engineers to conclude that replacement of the entire building and equipment is the only feasible way to proceed with a facility of this age. By replacing the building and equipment at one time, the existing Headworks can remain in operation until the new headworks is finished and ready for start up, at which time, valves will redirect wastewater flow to the new facility, allowing the old facility to be decommissioned.

f. Local Priority

If more than one application from the same government (1 of 2, 2 of 2, etc.)

1

g. State historic registry designation

Is the project on a State registered historic building, structure, site, or in a State Historic District?

No

g.1 State historic registry number

If the project is on the state registry, please provide the registry number. DOLA may need to seek a determination of effect from History Colorado and the State Office of Archaeology and Historic Preservation.

h. Current population

Current/most recent conservation trust fund/lottery distribution estimate or State Demographer estimate is acceptable.

2,256.00

h.1 Current population estimate source

D. DEMONSTRATION OF NEED

☐

The statutory purpose of the Energy and Mineral Impact Assistance program is to provide financial assistance to "political subdivisions socially or economically impacted by the development, processing or energy conversion of minerals and mineral fuels."

15 – Informational Items

COLORADO RIVER DISTRICT

PROTECTING WESTERN COLORADO WATER SINCE 1937

RESOLUTION 2020-1

A. **WHEREAS**, the mission of the Colorado River Water Conservation District is to lead in the protection, conservation, use and development of the water resources of the Colorado River Basin for the welfare of the District and to safeguard for Colorado all waters of the Colorado River to which the state is entitled; and

B. **WHEREAS**, the waters of the Colorado River which originate within the boundaries of the District are under increasing pressure at the same time that the flow of the river is decreasing due to long term drought; and

C. **WHEREAS**, in order to protect the water resources of the District in these increasingly contentious times, the people of the District need the District to be a strong and effective advocate and to lead in the identification and implementation of multi-purpose water projects in all areas of water use in western Colorado including areas such as productive agriculture, infrastructure, healthy rivers, watershed health and water quality, conservation and efficiency; and

D. **WHEREAS**, the Colorado River Water Conservation District revenues have been and are projected to continue to be negatively impacted due to declining revenues from the energy sector, the impacts of the Gallagher amendment and the revenue limitations of the Taxpayer Bill of Rights; and

E. **WHEREAS**, The Board of Directors of the Colorado River Water Conservation District believe that it is appropriate to ask the voters of the District to authorize an increase in taxes to fund the District's critical work; and

F. **WHEREAS**, The Board of Directors of the Colorado River Water Conservation District believe that it is their obligation to voters to indicate their commitment as to how any such new tax revenue will be spent by the District.

NOW THEREFORE, BE IT RESOLVED that the Board of Directors of the Colorado River Water Conservation District officially certify and direct that the following ballot question be placed on the ballot in all fifteen of the counties within the District:

Shall Colorado River Water Conservation District, also known as the Colorado River District, taxes be increased by an amount up to \$4,969,041 in 2021 (which increase amounts to approximately \$1.90 in 2021 for every \$100,000 in residential home value), and by such amounts as are generated annually thereafter from an additional property tax levy of 0.248 mills (for a total mill levy

of 0.5 mills) to enable the Colorado River District to protect and safeguard Western Colorado water by:

- *Fighting to keep water on the West Slope;*
- *Protecting adequate water supplies for West Slope farmers and ranchers;*
- *Protecting sustainable drinking water supplies for West Slope communities; and*
- *Protecting fish, wildlife, and recreation by maintaining river levels and water quality;*

provided that the District will not utilize these additional funds for the purpose of paying to fallow irrigated agriculture; with such expenditures reported to the public in an annually published independent financial audit; and shall all revenues received by the District in 2021 and each subsequent year be collected, retained and spent notwithstanding any limits provided by law?

BE IT FURTHER RESOLVED, that the Board of Directors of the Colorado River Water Conservation District hereby authorizes Board officers and District staff to take any and all necessary steps to place the above question lawfully on the ballot in all fifteen counties in the next general election which shall take place on November 3, 2020; and

BE IT FURTHER RESOLVED, that the Board of Directors of the Colorado River Water Conservation District also adopts the Fiscal Implementation Plan as a statement of its commitment to the public as to how any revenue generated by the above identified ballot question will be expended by the District.

The Board of Directors of the Colorado River Water Conservation District indicated its consent to Resolution 2020-1 by motion on July 21, 2020.

COLORADO RIVER WATER CONSERVATION
DISTRICT

By: 
David H. Merritt, President

Attested to by:

Andrew A. Mueller, Secretary/General Manager

COLORADO RIVER DISTRICT

PROTECTING WESTERN COLORADO WATER SINCE 1937

Implementation Plan for
Additional CRWCD Funding Acquired
Through a Successful Ballot Question
Authorizing a Mill Levy Increase
Adopted by the Board July 21, 2020
As part of Resolution 2020-01

WHAT:

Potential Ballot Question in November of 2020 requesting authority to raise CRWCD mill levy by .248 mills, increasing the total mill levy from .252 to .5 mills.

HOW MUCH:

Projected to raise \$4.9 million in additional annual tax revenue for the District.

TIMING:

The tax increase will, if approved by the voters, commence with payment of taxes in 2021.

TABOR:

The ballot question if approved by the voters, will eliminate the Spending/Revenue Taxpayer Bill of Rights (TABOR) limitations on the District but not the tax rate cap. This means that the District will be able to keep and spend state and local grant funds and additional revenue generated by increased valuations greater than the TABOR revenue cap which is limited to inflation plus local growth. However, if this ballot question is approved by the voters, the District's annual mill levy will be capped at .5 mills and the District's tax revenue will be limited by this cap. This ballot question is a TABOR compliance question, meaning that it follows and respects the directives and requirements of TABOR with respect to seeking voter approval for the proposed tax increase and the retention and expenditure of additional revenue.

GALLAGHER:

The proposed question does not eliminate the potential adverse implications to the District revenue stream posed by the Gallagher Amendment. Meaning that if the state fails to resolve the problems posed by the declining Residential Assessment Rate, the District's entire revenue stream will be impacted.

HOW THE MONEY WILL BE EXPENDED:¹

As stated in the proposed ballot question, the River District will utilize the entirety of the \$4.9 million in additional revenue for the following purposes:

- Fighting to keep water on the West Slope;
- Ensuring adequate water supplies for West Slope farmers and ranchers;
- Ensuring sustainable drinking water supplies for West Slope communities; and
- Protecting fish, wildlife, and recreation by maintaining river levels and water quality.

More specifically, the Colorado River District will allocate approximately \$4.2 million annually or approximately 86% of the amount raised, for partnerships with water users and communities within the District on projects identified as priorities by local communities and Basin Roundtables. The Board and staff of the Colorado River District will prioritize multi-purpose projects that meet needs in one or more of the following five categories: productive agriculture, infrastructure, healthy rivers, watershed health and water quality, conservation and efficiency. The District is committed to expending funds in an equitable manner which, over time, disperses the benefits of the program geographically within the District boundaries and between the identified categories. The District is also committed to utilizing these funds to drive the initiation and completion of projects that are priorities for residents of the District by utilizing District funds as a catalyst for matching funds from state, federal and private foundation sources. Bringing these funds to the table will allow the West Slope to strongly influence the type, scope and timing of important water supply projects within our District. The District is committed to coordinating and consulting local elected officials in any and all relevant counties prior to committing funds to any specific project or activity pursued by the District.

The categories of projects that the District will be looking to partner are more specifically described as follows:

- (I) **Productive agriculture projects** which could include multiple-use storage that addresses regional priorities; developing innovative and functional water leasing; suitable agriculture efficiency and conservation approaches; technical assistance and technological innovation; and dedicated resources for increasing community literacy about irrigated agriculture and supporting agricultural market growth. The District will not utilize these funds for the purpose of permanently or temporarily fallowing irrigated agriculture;
- (II) **Infrastructure projects** which could include upgrading aging infrastructure while incentivizing new storage and delivery projects that collaboratively address multiple needs, such as improved flows to meet demands, stream and

¹ The expenditures discussed in this section of the plan are stated in the affirmative “will.” The District’s ability to allocate and expend these funds is contingent upon a ballot question being placed on the ballot and voters approving the question, and is subject to constitutional limits on multi-year fiscal obligations and future governance determinations that are consistent with the authorizations provided by an approved ballot question.

watershed health, and habitat quality; multi-purpose projects and storage methods that are supported in the Water Plan and the Basin Implementation Plans;

- (III) **Healthy rivers projects** which could include those identified in stream management plans or similar projects, projects that support and sustain fish and wildlife, healthy aquifer conditions as they connect to healthy streams, economically important water-based recreation, wetland habitat, fish passage construction for new or revised water diversion structures, stream restoration projects, and environmental and recreational enhancements for new or revised water supply projects;
- (IV) **Watershed health and water quality projects** which could include projects identified in collaborative and science-based watershed management plans that reduce the risk from and increase resilience to fires and/or floods, rehabilitate streams, or make landscapes resilient to climate change, including, but not limited to science-based mechanical forest treatments and prescribed fire, projects that address drinking water quality for under-resourced communities, and projects that address pollutants such as selenium, salts, and others, as well as mine remediation activities; and
- (V) **Conservation and efficiency projects** which could include supporting agricultural water infrastructure that increases reliability and efficiency; municipal and industrial projects that promote efficiency, water conservation, green infrastructure, and outdoor landscaping to reduce consumptive use; increase leak detection for infrastructure repair and replacement; assisting communities with water-smart community development and water conservation programs; and targeting smaller, fast-growing, and communities with older infrastructure with strategic, incentive-based investments.

While the District cannot, at this time, commit funds to specific projects due to uncertainties associated with most projects related to permitting, litigation, additional funding and other third party actions, the following are projects endorsed by the Basin Roundtables in the Yampa/White/Green, Colorado and the Gunnison Basins which are representative of types of projects that the Colorado River District anticipates partnering on should voters approve the ballot question:²

Yampa/White/Green Basins representative projects:

Maybell ditch diversion structure and headgate rehabilitation and system efficiency improvements:

The modern headgate and additional system efficiency improvements will allow irrigators to better control the volume of water diverted from the Yampa, improving flows for non-consumptive users along 18 miles of the Yampa, as well as improving delivery for Maybell irrigators.

² By listing projects here, the Colorado River District does not intend to indicate any preference or priority of the listed projects over any other potential project.

Yampa River forest restoration and temperature mitigation:

The 2018 Yampa River Health Assessment and Streamflow Management Plan (aka The Stream Management Plan) found that the riparian forest is degraded on the reach of the Yampa River above the Chuck Lewis State Wildlife Area, through Steamboat and to the Wastewater Treatment Plant and that improving the quality of the vegetation, particularly the shading canopy cover, will lead to improvements in stream temperature and water quality on the Yampa River. By restoring the river forest, this 3-year project that was identified as a top priority action item in the Stream Management Plan, will also help to improve aquatic and terrestrial habitat and to stabilize the river channel thus making it more resilient to floods, droughts, or human impacts.

White River algae study and eventual mitigation:

High levels of Benthic algae have reached uncharacteristic and nuisance levels in the White River which have caused significant problems for consumptive and non-consumptive water users in the White River. The USGS study, which will be completed next year should shed light on contributing factors to the algae problem and will likely lead to identification and implementation of actions to address the problem.

White River Storage Project:

There has been significant work done to identify current and future water shortages for municipal, industrial, recreation and environmental purposes on the lower White River. Funds could be utilized to assist in the scoping, identification of locations, permitting and eventual construction of an appropriately sized storage project designed to address the myriad of needs identified by the local water conservancy district.

Gunnison Basin representative projects:

Cunningham Lake Reservoir Rehabilitation:

This project is located in the upper Gunnison River Basin and is representative of projects identified in the Stream Management Plan which identifies projects which will serve multi-beneficial purposes of maintaining water supplies for consumptive uses, stabilizing environmental flows and providing optimal temperatures. It is the rehabilitation of existing dam, which will improve delivery systems into and out of the reservoir, reduce irrigation shortages and improve Sage Grouse habitat.

Paonia Reservoir and Fire Mountain Canal Rehabilitation:

This project is located in the North Fork of the Gunnison and involves implementing a sediment control system and extending the enclosed conveyance network and constructing integrated telemetry-based measurement and control (SCADA) water storage and delivery facilities. It will improve water quality in the Gunnison River and enhance the ability of productive agriculture to thrive for generations to come.

Aspen Canal, Smith Fork Feeder and the Crawford Clipper Ditch:

This project is on the Smith Fork of the Gunnison River designed to more efficiently meet agricultural water needs while improving river flows and improving water quality in this

water-short sub-basin system by extending enclosed conveyance network and constructing integrated telemetry-based measurement and control (SCADA) water storage and delivery facilities.

Uncompahgre Valley Water Users Association Westside Valley Infrastructure Improvements:

This project is part of the Lower Gunnison Project on the Lower Uncompahgre and is designed to modernize and improve off- and on-farm water diversion, delivery and application infrastructure in the Uncompahgre River to more efficiently meet agricultural water needs while improving river flows and improving water quality in this water-short sub-basin, and it includes extending enclosed conveyance network and constructing integrated telemetry-based measurement and control (SCADA) water storage and delivery facilities.

Upper Uncompahgre Augmentation Plan/Ramshorn Reservoir:

This proposed project involves a relatively small multi-purpose reservoir which will help maintain environmental flows and provide additional needed protection to agricultural irrigators and municipalities from a senior call in extremely dry years.

Colorado River Basin representative projects:

Maintaining flows secured by the Shoshone call:

The Shoshone Power Plant is owned and operated by Xcel Energy and is located on the mainstem of the Colorado River in Glenwood Canyon. When the power plant is operating, the Shoshone Call, as a non-consumptive water right, can command the flow in the Colorado River and “pulls” water from the headwaters through Glenwood Canyon westward to the Grand Valley. The viability of a 100+ year old infrastructure is always in question making the exploration of more permanent long-term solutions an integral component of maintaining the Colorado River’s historical flow regime. Maintaining this historical stream flow regime provides significant administrative certainty for West Slope water users as well as several benefits for recreation, the environment, and water quality.

Grand Valley Roller Dam Rehabilitation:

The Roller Dam on the Colorado River was constructed in 1913 and is the point of diversion for several large senior irrigation rights. These irrigation rights are the primary calling rights on the Colorado River during the irrigation season and remain a significant source of irrigation water, while at the same time ensuring a consistent flow from the headwaters during the summer months. Maintaining this infrastructure is not only vital for agricultural interests in the Grand Valley but also provides for reliable administration for other water users as well as recreational and environmental benefits from consistent stream flows.

Windy Gap Reservoir Connectivity Channel:

Windy Gap Reservoir is an on-channel reservoir located on the Colorado River in Grand County that is owned and operated by the Municipal Subdistrict of the Northern Colorado

Water Conservancy District. The Subdistrict, with the support of the River District, Grand County, Colorado Water Conservation Board, Colorado Parks and Wildlife, Trout Unlimited, the Upper Colorado River Alliance, and other parties, intends to construct and operate the Windy Gap Connectivity Channel. The Connectivity Channel, once constructed, will provide a channel through the current footprint of the Windy Gap Reservoir, allowing the reconnection of the Colorado River. Based upon studies completed to date, the Connectivity Channel is expected to provide significant environmental benefits for the Colorado River by enhancing sediment transport, reducing streambed armoring, moderating elevated water temperatures, providing connectivity for aquatic life and fish passage, and enhancing aquatic habitat.

The remaining approximately 14% of the funds will be utilized by the District to fix the District's internal financial structural deficit caused by the cumulative impact of the Gallagher Amendment, the decline of tax revenue from the fossil fuel industry, and the Taxpayers' Bill of Rights revenue limitations. **The District will not utilize the new revenue to create additional staff positions** but will allocate the money to fund existing staff positions and business-related expenses. This allocation will help to ensure the financial integrity of the important work of the River District's enterprise fund by preserving enterprise reserves for anticipated capital expenses and critical maintenance and repair work on water supply assets owned by the District.

Colorado River District Webinar Highlights Prolonged Drought Conditions, Rising Temperatures as Major Threats to West Slope Water Supply

Glenwood Springs, CO — Rising temperatures in Western Colorado are reducing average runoff from snowpack, robbing the Colorado River system of water, and forcing farmers and water providers to plan for a new reality that includes less water from the Colorado River.

In the third session of the Colorado River District’s virtual Annual Water Seminar, *Zooming in on West Slope Water*, District staff and experts from throughout the Colorado River Basin provided an overview of research, data and planning efforts related to water management in a multi-decadal drought that has taken a toll on West Slope water supplies.

Wednesday’s panel included presentations by Denver Water and the Southern Nevada Water Authority, among others, and highlighted some of the major infrastructure investments and planning exercises that large municipal water providers are taking-on throughout the Basin.

"Our charge at the Colorado River District has always been to look to the future and take actions to protect the West Slope’s water resources 10, 20 and even 50 years from now," says River District General Manager, Andy Mueller. "Prolonged drought presents a real and meaningful threat to West Slope water users. And unfortunately for us, it also means that West Slope water will be even more attractive to major cities and municipalities in the future."

On top of the hottest August ever measured in Western Colorado, Jeff Lukas, senior research associate at University of Colorado Boulder’s Western Water Assessment, said temperatures in western Colorado have risen more than 2 degrees Fahrenheit since 1980. He also said the summer of 2020 was the fourth hottest on record while August was the hottest on record.

Lukas said warmer temperatures increase the movement of moisture to the atmosphere through plant life and evaporation, at the expense of runoff and streamflow. Research reviewed by Lukas and others has shown that for every increase of 1-degree F in temperatures leads to a 4 to 5% decrease in streamflows. He also said that hot, dry months create dry soils, which are then a “tax” on runoff from the next snowpack amounting to 10% or more.

Juliet Eilperin, a Pulitzer Prize-winning journalist whose team researched National Oceanic and Atmospheric Administration (NOAA) temperature data recorded since 1895, said that the largest “hotspot” in the nation — a large handful of counties that had seen more than 3.6-degree increases — overlap the western half of the Colorado River District and eastern Utah. She noted that some farmers she interviewed in her research are planning for water supply challenges by modernizing irrigation systems and planting higher market value crops to get the most out of the water they have.

“Understanding your West Slope water is critical to understanding why and what we have to do to protect it,” Mueller said. “We hope you’ll join us by watching our upcoming seminar webinars or tuning in to one we’ve already hosted.”

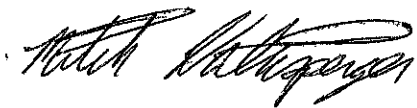

A recording of this webinar, along with the River District’s previous seminars in the *Zooming in on West Slope Water* series are available online at <https://www.coloradodistrict.org/annual-seminars>

Dear Town Council,

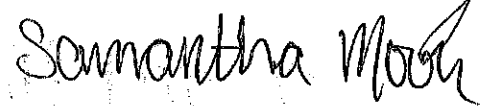

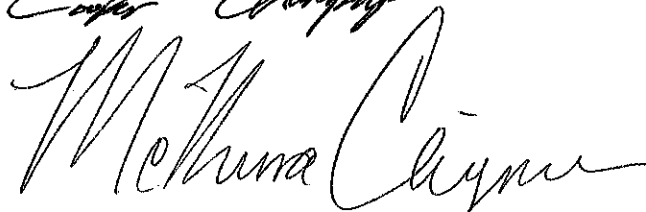

I wanted to take this time and express our great appreciation for being a sponsor of the 11th annual Rock n' Bull event. This year has been very challenging and it means a great deal for you guys to continue your support of CNCC and the rodeo program. To say we couldn't do it without your support would be an enormous understatement.

Thank you for your continued support of the CNCC Rodeo Team.

Sincerely,

Mitch Waltisperger

Colorado's "Move Over" law has new requirements

Stopping a speeder on a busy highway can be an extremely dangerous situation for law enforcement officers, especially considering the high speed limits on many of Colorado's roads.

Colorado has long operated under something called the "Move Over" law, which basically requires drivers to move a lane away from law enforcement officers parked on the side of the road while making a pass. The rule was originally implemented in 2005 and applies to those passing all law enforcement vehicles, emergency vehicles, first responders, and tow trucks that are displaying visual cues to make their presence known in the form of flashing, rotating, or oscillating lights.

However, many times, factors like weather or traffic may prevent drivers from being able to safely move a lane away from vehicles parked on the side of the road. This has long posed a problem, as some specifics about what a driver should do in this scenario were not directly addressed in the official language of the law.

In order to solve this problem, the law has been updated to require drivers drop their speed at least 20 miles per hour below the posted speed limit while passing in a parked police officer or the like in an adjacent lane. If the speed limit is 40 miles per hour or less, drivers only need to drop their speed to 25 miles per hour.

Proposed Highway Through Book Cliffs Faces Opposition From Grand County, Again

KUER 90.1 | By Kate Groetzinger

Published September 23, 2020 at 6:54 PM MDT

Bureau Of Land Management Utah / Flickr

The Book Cliffs extend through eastern Utah into western Colorado, and draw more than 6,000 hunters annually.

A coalition of rural counties is trying to convince the state to build a highway through the Book Cliffs in northern Grand County to promote tourism. But critics say the highway offers marginal benefits, is a waste of taxpayer money and could endanger wildlife, like elk and bison, who call the lush mountains and canyons home.

When the highway was first proposed in the late 1980s, it was meant to aid extractive industries. It's currently called the Eastern Utah Regional Connection, and proponents

KUER
Weekend All Things Consid

say it is needed to connect tourist destinations in northeast Utah, like Flaming Gorge

National Recreation Area and Dinosaur National Monument, with the Mighty Five national parks in the south.

“What a tremendous recreational opportunity that will be to our state and our entire region, to be able to connect the dots like that,” said Mike McKee, director of the Seven County Infrastructure Coalition.

Grand County joined the coalition in 2014 but dropped out a year later, due to public outrage over the group’s support for the Book Cliffs highway. And county residents still oppose the highway, according to a letter the county council voted to send to the Bureau of Land Management last week.

“In every instance, our citizens have consistently made clear that they oppose the construction of a highway through the Book Cliffs in Grand County,” the letter said. “Yet, time and time again, we are forced to restate our long standing opposition as the SCIC continues to burn thru (sic) taxpayer dollars to force this unwanted infrastructure development within Grand County’s jurisdictional boundary.”

The Bureau of Land Management is currently reviewing a right-of-way application from the Coalition, which received \$3.2 million from the state legislature in 2018 to conduct an environmental impact study for the road, according to McKee.

Gov. Gary Herbert wrote a letter to McKee in January, expressing his support for the project. And the coalition stated the road will be developed and maintained, “in conjunction with the State of Utah”, in its right-of-way application, submitted in February.

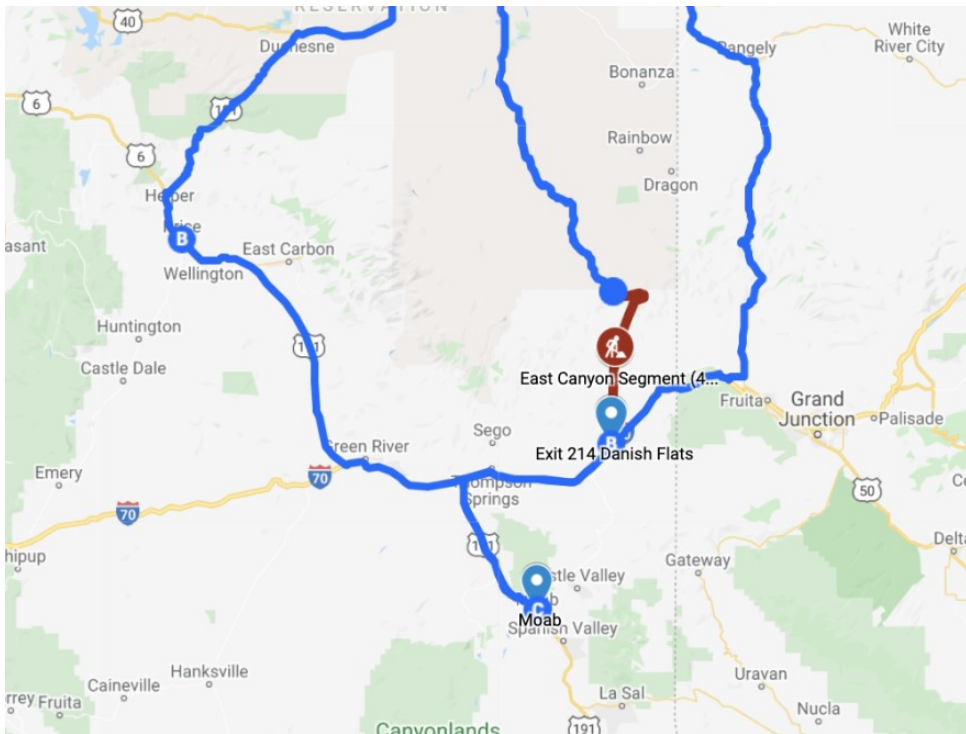

McKee pointed to an economic impact study conducted in 2015, which found the road would reduce the travel time between Vernal and Moab by 30 to 40 minutes and bring in additional \$80 million dollars in tourism revenue—and \$129 million in energy revenue—by 2040.

But critics say the benefits of the highway don’t outweigh its costs, which could be anywhere from \$195 to \$418 million, according to a recent estimate by the coalition. Trisha Hedin, an adjunct professor at Utah State University Moab, who is also on the Board of the Backcountry Hunters and Anglers, said the road would pose a significant threat to wildlife.

And Moab resident Sarah Stock estimates the drive from Vernal to Moab would only be around 24 minutes shorter using the Book Cliffs highway compared to the existing route through Rangely, Colorado.

Stock said the drive from Dinosaur National Monument to Moab would actually be three miles longer using the new highway versus the one in Colorado. She works for Living Rivers, a conservation group that opposes energy development in the Uintah Basin.

Courtesy Of Sarah Stock

Vernal to Moab via Price is 227 miles, Vernal to Moab via Rangely is 217 miles, and Vernal to Moab through the Book Cliffs is approximately 190 miles, according to Stock's estimates.

Grand County Councilmember Jaylyn Hawks cited Stock's estimates, saying the road poses basically no benefit to tourists traveling to Moab.

"This is a case where I firmly believe that, if you build it they will not come," she said. "Because they've already got two other roads to get them there."

Subject: 2020 Broadband Marketing Campaign Follow-Up

Hi all,

I wanted to follow-up/update you all on the Broadband campaign that we recently wrapped up. As you may recall, the original plan was to run the campaign through the end of 2020, but with the upcoming budget and department changes (along with the craziest year in history), we decided to end the campaign at the end of the 3rd quarter. We were only able to carry out 2 of the 4 planned campaigns due to COVID interruptions and now budget interruptions, however we still feel that overall we were successful in reaching and impacting our targeted audiences. I of course wish we could continue to build on this momentum (these things take time) but unfortunately that's not the case.

The following information is for the **Broadband marketing ONLY**, and doesn't include any of the social lifestyle, visit, general county, etc. ads/promotional videos that we also ran under the "Redefine" theme. Please feel free to share these results with anyone you think may be interested.

If you have any questions, please let me know!

Have a great rest of your week,

Making Waves in Rifle

RIFLE, CO (September 29, 2020) –

RECONNECTING PEOPLE ONE WAVE AT A TIME.

That's the motto of the newly formed City of Rifle Humanity Restoration Crew.

City of Rifle City Manager Scott Hahn has watched human interaction continue to slowly diminish over the past few years. Electronics, busy lifestyles and now COVID-19 have reduced once-friendly strangers to people who barely acknowledge one another as they pass on the street.

Scott wants to see you smile. And wave. And say "hello". And he has a plan to put that into action. He has created the crew whose mission it is to spread kindness, friendliness and get people to acknowledge one another once again.

"People are thirsty for contact. How can you be a community if you don't look at one another?"

There are signs and buttons around town featuring a happy face and positive messages. Members of the crew as well as all City employees are leading by example.

Some may say that the idea is a tad corny, a perspective the team has embraced. Especially since virtually everyone they speak to wants to be a part of a positive movement.

"They roll their eyes at first then tell us they love the idea and ask how they can become involved," the team noted. "Everyone is really feeling the disconnect and

divisiveness so prevalent these days.” An article posted earlier this month on [bbc.com](https://www.bbc.com/news/world-48459940) titled “The Surprising Benefits of Talking to Strangers” explored in detail the positive psychological, sociological and even physiological effects of human interaction. <https://www.bbc.com/news/world-48459940>

To spread the message and get people to laugh, the City has created a funny video designed to embrace the silly and help people reconnect. Check out the video at www.rifleco.org/wave or the “Visit Rifle” YouTube Channel <https://youtu.be/pWGkvpl3UZw>.

The City of Rifle challenges other communities, schools and businesses to join the movement to bring “friendly” back. Send us thoughts, videos and pictures to humanityrestorationcrew@rifleco.org or use #humanityrestorationcrew. If you are a Rifle citizen or business and would like a yard sign or some buttons, please contact Kim Burner at kburner@rifleco.org or call 970-665-6496.

We can’t wait to see what people come up with!
